

# IRISH DEXTER CATTLE SOCIETY

## GENOTYPING REQUEST FORM

Animals genotyped through the Dexter Cattle Society UK will need to be regenotyped.

This is to have the genomic data of these animals available in the Irish system.

Animals already genotyped through the BDGP Scheme will not need to be Regenotyped

**Please note: this scheme does not apply to calves born in 2021**

If returning this form by email – your email address entered above will be accepted in lieu of signature – send to [office@dextercattlesociety.ie](mailto:office@dextercattlesociety.ie)

or [info@dextercattlesociety.ie](mailto:info@dextercattlesociety.ie)

If Posting; Lesley Sandes, Ballyhasty, Cloughjordan, Co Tipperary E53HX85

- 1 Herd-owner will receive a hair sampling kit for DNA collection, hair sampling instructions and a freepost return envelope in the post
- 2 Hair follicles are pulled from the tail end of the individual animal and placed in the hair card provided
- 3 The sample is then posted in the freepost return envelope
- 4 The sample is analysed in the laboratory and the data is automatically transmitted to the ICBF database
- 5 The results are evaluated and published online
